Objectives of vehicle certification

Vehicle certification is about ensuring that vehicles used on New Zealand's roads meet the roadworthiness requirements defined in New Zealand law – when they enter the fleet and throughout their on-road lives.

Objectives of the Performance Review System (PRS)

The NZ Transport Agency's (NZTA's) goal is to improve transport for all New Zealanders by improving the integration, safety, responsiveness and sustainability of the transport system. To do this, everyone involved in vehicle certification must apply the requirements set out in law accurately and consistently. For certifiers, this means following the requirements specified in their *Vehicle inspection requirements manual (VIRM)* and other required documentation.

The PRS is a tool used by the NZTA for all certifiers and is intended to:

- focus on issues important to road safety
- be open and transparent in reviewing the performance of certifiers
- provide a level playing field, as it applies equally to all certifiers
- be easy to understand and use
- allow certifiers to measure their own performance in exactly the same way as an NZTA transport
 officer during a review
- allow and encourage certifiers to identify problems and opportunities to improve so they can take early action on their own initiative
- identify certifiers who perform well so they can be given incentives to maintain their performance and look for ways of continuously improving it
- identify certifiers who perform poorly so they can be encouraged through more frequent reviews to improve their performance.

How the PRS works

The PRS clearly sets out:

- what is expected of certifiers
- the way the NZTA will assess certifiers' performance against these expectations
- a scoring system that enables certifiers' performance to be measured.

The PRS is made up of two main parts:

1. General part This identifies five general categories that are important for all types of

certification work.

2. Technical part
The Technical part differs for each type of certification work. For example,

for entry certification, the categories of the Technical part follow the items

set out in the VIRM: Entry certification.

The General part measures how well certifiers perform in complying with all legal requirements (including NZTA requirements) relating to vehicle certification. It does this by measuring performance in five categories:

1. Technical performance Do certifiers identify vehicles and components correctly, make

correct technical decisions and certify those vehicles and

components correctly? Are they competent in all technical aspects

of their certification work?

2. Administrative performance Are certifiers competent in all administrative aspects of their

certification work, including the proper use of documents and

correct entry of information?

3. Resources Do certifiers have the right resources for their certification work, eg

the right facilities and equipment?

4. Management Do certifiers properly manage the parts of their operations that

support their certification work, eg do they make sure their

equipment is properly maintained?

5. Performance improvement Do certifiers actively identify problems and opportunities to improve

and take advantage of them? Do they regularly review their own

performance? Are they open to complaints?

Each category is made up of a number of elements that are relevant to the category. For example, the resources category is made up of the following elements:

- facilities
- technical equipment
- administration equipment
- technical information
- · controlled certification documents
- · certification staff.

In this manual each category has a scoring page associated with it which provides performance descriptions and corresponding scores for each element. Scores range from 0 to 3 and are allocated by matching a certifier's performance to the corresponding descriptions set out in the scoring pages.

The Technical part also has scoring pages. The scores from these feed into the General part to produce a total score.

How the parts of the PRS fit together

How NZTA transport officers will use the PRS

During performance reviews, our transport officers will observe you at work. Transport officers will compare your performance with the descriptions on the PRS scoring sheets, and will score you accordingly. These scores will be combined into an overall PRS score.

We will tell you the result for each area reviewed, and you will be able to use your PRS manual to see how the score was calculated.

There are no hidden measurement or scoring systems. Transport officers are encouraged to help you understand how the system works and how it can be used to help continuous improvement. Success for the NZTA will be measured in higher performance scores – not in greater numbers of faults detected.

Using the PRS to improve your performance

We encourage certifiers to use the PRS regularly to review their own performance, and to identify problems and opportunities to improve. This section of this manual is called *Measuring your performance*, and the scoring guidelines section explains how this is done.

Benefits of good performance

The NZTA will reward good performance scores by reducing the frequency of planned review visits. This will save you money by reducing the cost of planned review fees. It will also reduce the disruption to your business caused by reviews.

Penalties for poor performance

Poor performance scores will reduce the NZTA's confidence in you as a certifier. Such scores will mean more planned review visits so that your performance can be more closely monitored (see the table **PRS Scores and actions** in the Measuring your performance section). Poor performance scores will increase the cost to you in planned review fees and the disruption to your business caused by reviews. We hope this will encourage you to use the results of the PRS to improve your performance.

Enforcement action

The PRS is a powerful tool to enable the NZTA to identify persistently poor performers. We are confident that most certifiers will respond positively to the PRS approach and use it to help improve their performance. When certifiers fail to respond positively and continue to perform poorly, this will be identified by PRS reviews. In these cases, the NZTA will focus its enforcement and investigation resources on obtaining evidence of poor performance.

The final sanction

Clear evidence of persistently unacceptable performance will lead to disciplinary action. If certifiers fail to respond to warnings and suspension action, evidence gained during reviews will be used to support the case for withdrawal of their authorisation.

Road safety and the maintenance of a fair vehicle certification system demand firm and decisive action by the NZTA. When certifiers fail to carry out their responsibilities the NZTA will act to remove their authorisation. This will be done in a fair and reasonable manner and decisions will be open to appeal.

Working together in partnership

The NZTA's aim is to work together with certifiers openly and transparently to achieve our joint goals of high standards of certification, leading to an improvement in road safety.

Definitions and abbreviations

Adjusted score Means the total score that has been adjusted to take into account element scores of 1+ or

less, ie where there is poor performance in some areas.

Category These are the different areas that make up inspection and certification work. There are five

categories which are weighted depending on their importance: Technical performance, Administrative performance, Resources, Management and Performance improvement. The

five categories make up the General part of the PRS from which a score is derived.

Certifier Means a vehicle inspector and/or inspecting organisation, depending on the context, and

includes a specialist certifier.

Computer system Means the system into which the certifier enters certification .

Controlled document Means a document you must use and complete as part of your inspection and certification

work, such as WoF labels, checksheets, certification plates or certificates.

Description Means the performance description for each element score against which the certifier's

performance is assessed. There are four descriptions for each element, one each for the

scores 0, 1, 2 and 3.

Element Means a detailed area relating to inspection and certification work, and related elements

are grouped together to make up a category.

Element score Means the score that is assigned to an element.

External document Means any document supplied by an outside party (eg from a vehicle owner or

manufacturer) that you rely on in your inspection and certification work, such as an

exemption notice.

General part Means the main part of the PRS which consists of the five categories and from which the

total score is calculated.

Inspection and

certification document Means a document you use as part of your certification work, such as a checksheet or

certification label. It includes controlled, uncontrolled and external documents.

NZTA Means the NZ Transport Agency.

PRS Means the performance review system.

Random re-inspection Means a transport officer visiting unannounced between reviews and re-inspecting a

vehicle that the certifier has just certified. This gives the NZTA information about how the

certifier is performing between reviews.

Requirements Means NZTA requirements which are contained in the PRS manual, your *VIRM*, your

agreement/contract with NZTA and other information issued by NZTA.

Review Means an assessment of your performance as a certifier, and is usually scheduled in

advance depending on the score you achieved at the previous review. Reviews are carried

out by NZTA transport officers.

Score This is the result of your review and gives an indication of how well you performed. The

higher the score, the better your performance as a certifier.

Introduction

Page 7

Definitions and abbreviations (cont.)

Self-assessment Means you assess your own performance using the same criteria as the NZTA transport

officer does when he or she carryies out a review. The PRS requires you to carry out regular

self-assessments.

Technical partMeans the part of the PRS that relates directly to the technical aspects of the inspection

and certification work, ie technical decisions, technical competence and inspection equipment. The Technical part scores are transferred to the General part before the total

score is calculated.

Total score This is the score that is calculated when all the element scores have been assigned and

the category scores have been weighted, but before it has been adjusted for areas of poor

performance.

document

Uncontrolled Any document you develop yourself as part of your inspection and certification work, such

as design calculations or technical drawings.

VIRM Means the Vehicle inspection requirements manual. There are different VIRMs, depending on

the type of certification work, and each one has a corresponding PRS manual.

Weighted category Means a category score that has been weighted to reflect its importance in the overall

score inspection and certification work relative to the other categories.
