

Repair certifier applications

Repair certifiers carry out specialist inspection and certification of repairs to light vehicles and/or motorcycles that have suffered significant damage or deterioration to the structure, chassis, body-to-chassis attachment, suspension or occupant protection system.

The primary duty of a repair certifier is to ensure that a repaired vehicle is within safe tolerance of the manufacturer's specifications.

If you're interested in becoming a repair certifier, refer to the RepairCert NZ website for more information.
